## Information on DVD recording

### Information

This DVD recorder can record to DVD-R and DVD-RW discs. When recording, you will need to select a recording format between Video mode and VR mode depending on the disc format. The disc format for DVD-R is always "Video format", so a recording format will be "Video mode".
On the other hand, when recording to DVD-RW, a recording format will be "Video mode" or "VR mode" because a disc format is available between "Video Recording format" and "Video format" for DVD-RW.

| Logo | Attributes |
|------|-----------|
| DVD RW DVD-RW | 12cm, single-sided, single layer disc Approx. max. recording time (SEP mode): 600 minutes (4.7GB) |
| DVD R DVD-R | 12cm, single-sided, single layer disc Approx. max. recording time (SEP mode): 600 minutes (4.7GB) |

### About Video mode and VR (Video Recording) mode

Video mode is the same recording format as DVD-Video discs purchased locally, so that you can play in most DVD players. To play in other DVD players, you will need to finalize (see page 39). Unless finalized, you can play, record additionally or edit discs recorded in Video mode with this unit.
VR (Video Recording) mode is a basic recording format for DVD-RW. You can record and edit repeatedly.

DVD players with **RW** are capable of playing DVD-RW recorded in VR mode.

| Disc type | Disc format | Functions |
|-----------|-------------|-----------|
| DVD RW DVD-RW | Video mode | Playing, limited recording, limited editing |
| DVD RW DVD-RW | VR mode | Playing, Original/Playlist editing |
| DVD R DVD-R | Video mode | Playing, limited recording, limited editing |

### Recording speed

You can select a recording speed among 6 options, and the recording time will depend on the recording speed you select as follows.

| Recording speed | Recording time * | Video/Sound Quality |
|-----------------|------------------|---------------------|
| XP (1H) | 60 min | ★★★★★★ |
| SP (2H) | 120 min | ★★★★★ |
| LP (4H) | 240 min | ★★★★ |
| EP (6H) | 360 min | ★★★ |
| SLP (8H) | 480 min | ★★ |
| SEP (10H) | 600 min | ★ |

* This table is designed for a new single-sided 12cm disc as the standard. The recording time are estimates and actual recording time may differ.
* The audio and video quality is getting poorer as the Recording time becomes longer.

### Restrictions on recording

You cannot record copy-protected video using this DVD recorder. Copy-protected video includes DVD-Video discs and some satellite broadcasts.
If copy-protected material is encountered during a recording, recording will pause or stop automatically and an error message will be displayed on-screen.
Video that is "copy-once only" can only be recorded using a DVD-RW disc in VR mode with CPRM (see below).
When recording a TV broadcast or through an external input, you can display copy control information on screen.

**What is "CPRM"?**
CPRM is a copy protection system with scramble system regarding the recording of "copy once" broadcast programs. CPRM stands for Content Protection for Recordable Media. This DVD recorder is CPRM compatible, which means that you can record copy-once broadcast programs, but you cannot then make a copy of those recordings. CPRM recordings can only be made on DVD-RW discs formatted in VR mode, and CPRM recordings can only be played on players that are specifically compatible with CPRM.

26

### Glossary

**Analog audio**

An electrical signal that directly represents sound. Compare this to digital audio which can be an electrical signal, but is an indirect representation of sound. See also Digital audio.

**Aspect ratio**

The width of a TV screen relative to its height. Conventional TVs are 4:3 (in other words, the screen is almost square); widescreen models are 16:9 (the screen is almost twice as wide as it is high).

**Chapter**

Just as a book is split up into several chapters, a title on a DVD disc is usually divided into chapters. See also Title.

**Component video output**

Each signal of luminance(Y) and component(PB/CB, PR/CR) is independent to output so that you can experience picture color as it is. Also, due to compatibility with progressive scan video (525p/480p), you can experience higher-density picture than that in interlace (525i/480i).

**CPRM**
**(Content Protection for Recordable Media)**

CPRM is a copy protection system with scramble system regarding the recording of "copy-once" broadcast programs (e.g. some satellite broadcasts).

**Digital audio**

An indirect representation of sound by numbers. During recording, the sound is measured at discrete intervals (44, 100 times a second for CD audio) by an analog-to-digital converter, generating a stream of numbers. On playback, a digital-to-analog converter generates an analog signal based on these numbers. See also Sampling frequency and Analog audio.

**Dolby Digital**

The system to compress digital sound developed by Dolby Laboratories. It offers you sound of stereo(2ch) or multi-channel audio (up to 5.1ch).

**MP3 (MPEG Audio Layer 3)**

MP3 is a method of compressing files. You can copy MP3 files on CD-R/RW discs from the computer and play the files on this unit.

**Finalize**

To make DVD discs, which have been recorded on, possible to play in DVD players. With this DVD recorder, it is possible to finalize DVD-R/DVD-RW discs.

**PBC (VCD only)**
**(Playback Control)**

This function allows you to play interactive software using menu screen. See also Title in the Glossary.

**PCM**
**(Pulse Code Modulation)**

The most common system of encoding digital audio, found on CDs and DAT. Excellent quality, but requires a lot of data compared to formats such as Dolby Digital and MPEG audio. For compatibility with digital audio recorders (CD, MD and DAT) and AV amplifiers with digital inputs, this unit can convert Dolby Digital and MPEG audio to PCM. See also Digital audio.

**Playlist**

From this list you can play contents of a disc as your desired order or in sequence. Also it is allowed to search a specific scene directly.

**Regions code**

Regions associate discs and players with particular areas of the world. This unit will only play discs that have compatible region codes. You can find the region code of your unit by looking on the rear panel. Some discs are compatible with more than one region (or all regions).

**Sampling frequency**

The rate which sound is measured by a specified interval to turn into digital audio data. The numbers of sampling in one second defines as sampling frequency. The higher the rate, the better the sound quality as possible as it is.

**SAP**
**(Secondary Audio Program)**

Sub-audio channel which is delivered separately from main-audio channel. This audio channel is used as an alternate in bilingual broadcasting.

**S-Video output**

It delivers independently each signal of color(C) and luminance(Y) to TV as video signals, so that higher-quality picture will be gained.

**Title**
**(DVD)**

A collection of chapters on DVD disc. See also chapter.

**(VCD)**

Each contents of a Video CD. When playing a Video CD with PBC function, the title menu will appear automatically.

**Track**

Audio CDs and Video CDs use tracks to divide up the content of a disc. The DVD equivalent is called a chapter. See also Chapter.
